

# Gjled Repair WordPress Website SEO Report

Gjled Repair

<https://gjledrepair.com/>

## SEO optimization

I optimized your website using the **Rank Math** plugin, achieving an SEO score of 92 for the homepage. A sitemap was added, and best SEO practices were implemented to boost search rankings and stay ahead of competitors.

Additionally, I optimized the site speed, updated all plugins, and used the **RankMath Plugin** for performance enhancement.

The following SEO best practices were utilized for ranking the website

1. Common keywords were added to the homepage
2. The meta description was added
3. H1 and H2 tags were added to the site pages.
4. The alt attributes were added to the images.
5. A common keyword was added to the title and description of the homepage.
6. A correct number of internal and external links was added to the homepage.
7. The website's code contains the media queries, and the homepage is reachable.
8. The website is optimized for different screen sizes, especially desktop and mobile.
9. Schema tags and canonical tags were added to the site pages.
10. The website contains robots.txt and OpenGraph meta.
11. All other necessary measures were taken to improve the readability and accessibility, which in turn helped in the ranking of the site on search engines.
